DATE MAILED: 11/16/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.	09/825,973	Applicant(s)	HIRASHITA ET AL.
Examiner	Julio J. Maldonado	Art Unit	2823

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 27 October 2004.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-16 and 23-34 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 1-16, 23-34 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____

5) Notice of Informal Patent Application (PTO-152)

6) Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3, 5, 7, 9, 11, 13, 15, 23-30 and 31-34 rejected under 35 U.S.C. 103(a) as being unpatentable over Imai (U.S. 6,344,675 B1) in view of Tung (U.S. 5,728,625).

Imai (Figs.12-13D) teach a low resistance SOI-FET device including an insulating layer (2); a semiconductor layer (3) formed on the insulating layer (2), wherein the semiconductor layer (3) includes the channel region therein; a pair of impurity layers (9, 10) formed in regions which are respectively in contact with the channel region in the source region and the drain region; and a pair of metallic silicide layers (16) respectively formed in the source region and the drain region, wherein the pair of metallic silicide layers (16) are respectively in contact with the pair of impurity layers (9, 10), wherein bottom surfaces of the pair of metallic silicide layers (16) extend to bottom surfaces of the semiconductor layer (3), wherein the thickness of the metallic silicide layers (16) is equal to or more than 80% of form an upper surface of the metallic silicide layers (16) to the bottom surface of the semiconductor layer; wherein the metallic silicide layers (16) are composed of refractory metal and silicon, and wherein a ratio of the metal to the silicon in the metallic silicide layers is X to Y, wherein the metallic silicide layer

comprises cobalt silicide (column 22, line 66 – column 25 line 21 and column 43, line 6 – column 48, line 63).

Furthermore, Imai in another embodiment of the invention teaches wherein the source and drain regions extend between the cobalt silicide layers formed in said source and drain regions and the bottom surface of the semiconductor region (see, Fig.10).

Imai fails to expressly teach that the ratio of metallic silicide having the lowest resistance among stoichiometric metallic silicides is X_0 to Y_0 , and X , Y , X_0 and Y_0 satisfy the following inequality: $(X/Y) > (X_0/Y_0)$; wherein a ratio of cobalt to silicon is one to α ($1 < \alpha < 2$); and wherein a contact specific resistance between the metallic silicide layers and the impurity layers is less than $1 \times 10^{-7} \Omega \cdot \text{cm}^2$. However, Tung teach a conventional cobalt silicide used in a MOSFET contact, wherein the process of forming said silicide includes forming a metal layer on a surface of a substrate and performing a first heating process to form an intermediate product consisting of CoSi and Co_2Si , and further teach performing a second heating step to form a final product consisting of CoSi_2 (column 1, lines 51 – 60). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Imai and Tung to enable the metal silicide of Imai according to the disclosed conventional teachings of Tung.

Still, the combined teachings of Imai and Tung fail to expressly teach wherein the ratio of the metallic silicide having the lowest resistance among stoichiometric metallic silicides is X_0 to Y_0 , and X , Y , X_0 and Y_0 satisfy the following inequality: $(X/Y) >$

(X0/Y0); wherein a ratio of cobalt to silicon is one to α ($1 < \alpha < 2$). However, the claimed invention reads on the intermediate product of Tung and the average ratio of metal to silicon in said intermediate product the ratio of the metal (cobalt) to silicon is one to α ($1 < \alpha < 2$). Furthermore, according to Brodsky et al. (U.S. 6,323,130 B1), CoSi_2 is the lowest resistance silicide phase of cobalt (column 2, lines 50 – 58). Therefore, the intermediate product of Tung satisfies the inequality: $(X/Y) > (X0/Y0)$, and the combination of Imai and Tung inherently reads upon the claimed invention.

Furthermore, since the same material are treated in the same manner, the recited results would be obtained, i.e., the combined teachings of Imai and Tung inherently teach wherein a contact specific resistance between the metallic silicide layers and the impurity layers is less than $1 \times 10^{-7} \Omega\text{-cm}^{-2}$.

3. Claims 2, 4, 6, 8, 10, 12, 14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imai ('675 B1) in view of in view of Tung ('625) as applied to claims 1, 3, 5, 7, 9, 11, 13, 15 and 31-34 above, and further in view of the Applicants Admitted Prior Art.

Imai substantially teaches all aspects of the invention but fails to show wherein said FET device includes a depletion layer, which expands to bottom surfaces of the source region and the drain region when a voltage is supplied to the gate electrode thereof. However, the prior art teaches FET devices include a depletion layer, which expands to bottom surfaces of the source region and the drain region when a voltage is supplied to the gate electrode thereof (Instant pages 1 – 2). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to

combine the teachings of Imai and the prior art to enable including the depletion layer of the prior art in the device of Imai.

Response to Arguments

4. Applicant's arguments with respect to claims 1-16 and 23-34 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Julio J. Maldonado whose telephone number is (571) 272-1864. The examiner can normally be reached on Monday through Friday.

6. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri, can be reached on (571) 272-1855. The fax number for this group is 703-872-9306 for before final submissions, 703-872-9306 for after final submissions and the customer service number for group 2800 is (703) 306-3329.
